

Why are some children who are Black and African American sick months after getting COVID?

We are all still learning.
Doctors and RECOVER need
your help to find answers.

Some children who are Black and African American have long-term symptoms and health problems after having COVID, which is called Long COVID. This prevents them from playing with friends, going to school, and fully enjoying their childhood.

By joining RECOVER, your
child can help find answers
to Long COVID that could
make a difference in your
community.

RECOVER

Researching COVID to Enhance Recovery

An Initiative Funded by the National Institutes of Health

What else should I know about RECOVER?

Why should my child join?

We need children from Black and African American communities to fully understand Long COVID in your community.

By looking at children who had COVID and who never had COVID, researchers hope to answer these questions:

- Why do some children get Long COVID and others don't?
- What symptoms do children feel when they get Long COVID?
- How does having Long COVID affect children's health and development as they grow?

You can also join as their parent or caregiver!

What will my child do if they join?

We may ask you and your child to:

- Answer survey questions
- Have checkups and tests
- Take part for up to 4 years

We value your participation and will pay you for your time!

This study will not give anyone a treatment or medicine for COVID. If your child joins this study, your child can still take treatments and medicines their doctor gives them.

Will their information be kept private?

Yes! Your child's privacy is important to us. We will follow all laws to protect your child's personal information, including HIPAA.
