

If your child is 3–5 years old and never had COVID, we need their help.

Some children are sick months after having COVID. But we don't know why.

Your child can join a study to help us learn about the long-term health effects of COVID, called Long COVID.

We'll compare children who never had COVID to those who did. This helps us learn what symptoms and conditions may be related to Long COVID.

Who can join?

Your child can join if they're 3–5 years old and have **never had COVID**. We need children from all races, ethnicities, and backgrounds to join.

You can also join as their parent or caregiver!

What will happen if my child joins?

They'll get paid for their time and we may ask you and your child to:

- Answer survey questions
- Have checkups and tests

This study will not give anyone a treatment or medicine for COVID. If your child joins this study, your child can still take treatments and medicines their doctor gives them.

 **Your child's privacy is important to us.** We will follow all laws to protect your child's personal information.
