

Did your child just test positive for COVID? We need their help.

Your child can join a study to help us learn about the long-term health effects of COVID, called Long COVID.

We'll compare children who had COVID to those who never did – this helps us learn what's related to having Long COVID.

Who can join?

Your child can join if they **just tested positive for COVID** (which means they have COVID now). We need babies and children from all ages, races, ethnicities, and backgrounds to join.

You can also join as their parent or caregiver!

What will happen if my child joins?

They'll get paid for their time and we may ask you and your child to:

- Answer survey questions
- Have checkups and tests

This study will not give anyone a treatment or medicine for COVID. If your child joins this study, your child can still take treatments and medicines their doctor gives them.

 **Your child's privacy is important to us.** We will follow all laws to protect your child's personal information.
